ARTIFICIAL INTELLIGENCE *Shape the future*

October 2020 – January 2021

CALL for IDEAS

The technological revolution is transforming our lives at breakneck speed, dramatically altering the ways in which we work, learn and even live together.

Alongside the increasingly sophisticated use of big data, artificial intelligence (AI) is undergoing exponential growth and finding new applications in an ever-increasing number of sectors, including security, the environment, research and education, health, culture and trade.

AI could open up tremendous opportunities for achieving the Sustainable Development Goals (SDGs) set by the United Nations in the 2030 Agenda for Sustainable Development. Its applications enable innovative solutions, improved risk assessment, better planning and faster knowledge sharing, taking into account the aspects of an inclusive digital economy and society, as well as the security and stability of the designed systems.

Challenge:

You can create your own team, apply with your team's idea and try to develop it into a start-up.

Students can take part in this revolution. They can combine concepts and ideas in several application domains with AI-technologies to make the difference and shape the future. In particular, we are seeking solutions focusing on the following application domains:

- Automotive
- Smart environments
- Robotics
- Health
- Finance
- Education

This activity will be recognized within your educational plan with 8 CFU credits.

Check your institutional email and read the regulation carefully.

Then apply at www.challengeatpolito.it
